Ignition wire sets

Electricfil are the inventors and patent holders of Bougicord® ignition lead technology.

The conducting wire is spirally wound around a ferromagnetic core, resulting in ignition wire sets that are capable of conducting extremely high voltages without energy loss and with minimum electromagnetic interference.

Electricfil solution - ready technologies

Characteristics

- Cables exceeding the requirements imposed by the world's leading car manufacturers
- High corrosion resistance of terminals
- Positive connection with dual locking to sparkplugs, coil and distributor.
- Premium grade sparkplug and coil boots
- Stainless steel staple in contact with the spirally wound wire and terminal for electrical continuity

Electricfil knowhow

- Bougicord® technology, minimizing electromagnetic interference
- Cable insulation, connections and boots designed for maximum reliability and long life under severe under-the-hood conditions
- 600 models covering the needs of more than 8000 vehicles
- Specific range for vintage cars

Application domains

Engine management
